

STUDENT INFORMATION SYSTEM (SIS)

SQL

Task 1: Database Design:

1. Create the database named "SISDB".

```
CREATE DATABASE SISDB;  
USE SISDB;
```

2. Define the schema for the Students, Courses, Enrollments, Teacher, and Payments tables based on the provided schema. Write SQL scripts to create the mentioned tables with appropriate data types, constraints, and relationships.

- a. Students

```
CREATE TABLE Students (  
    student_id INT AUTO_INCREMENT PRIMARY KEY,  
    first_name VARCHAR(50),  
    last_name VARCHAR(50),  
    date_of_birth DATE,  
    email VARCHAR(100),  
    phone_number VARCHAR(20)  
);
```

- b. Teacher

```
CREATE TABLE Teacher (  
    teacher_id INT AUTO_INCREMENT PRIMARY KEY,  
    first_name VARCHAR(50),  
    last_name VARCHAR(50),  
    email VARCHAR(100)  
);
```

c. Courses

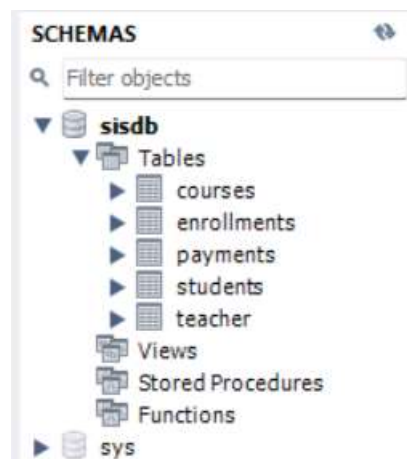

```
CREATE TABLE Courses (  
    course_id INT AUTO_INCREMENT PRIMARY KEY,  
    course_name VARCHAR(100),  
    credits INT,  
    teacher_id INT,  
    FOREIGN KEY (teacher_id) REFERENCES Teacher(teacher_id)  
);
```

d. Enrollments

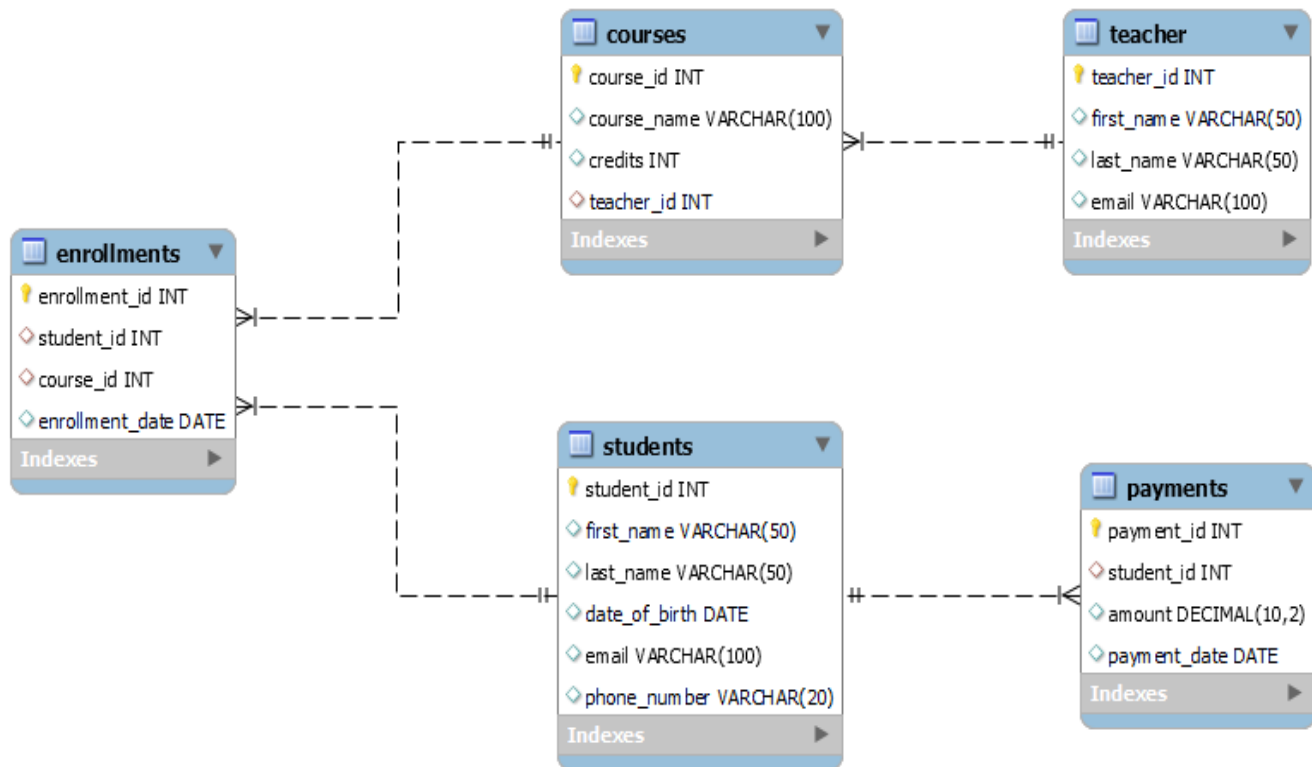

```
CREATE TABLE Enrollments (  
    enrollment_id INT AUTO_INCREMENT PRIMARY KEY,  
    student_id INT,  
    course_id INT,  
    enrollment_date DATE,  
    FOREIGN KEY (student_id) REFERENCES Students(student_id),  
    FOREIGN KEY (course_id) REFERENCES Courses(course_id)  
);
```

e. Payments

```
CREATE TABLE Payments (  
    payment_id INT AUTO_INCREMENT PRIMARY KEY,  
    student_id INT,  
    amount DECIMAL(10, 2),  
    payment_date DATE,  
    FOREIGN KEY (student_id) REFERENCES Students(student_id)  
);
```

3. Create an ERD (Entity Relationship Diagram) for the database.

4. Create appropriate Primary Key and Foreign Key constraints for referential integrity.

5. Insert at least 10 sample records into each of the following tables.

```

Tasks 3: Aggregate functions, Having, Order By, GroupBy and Joins:

1. Write an SQL query to calculate the total payments made by a specific student. You will need to join the "Payments" table with the "Students" table based on the student's ID.

```
SELECT s.student_id, s.first_name, s.last_name, SUM(p.amount) AS total_payments
FROM students s JOIN payments p ON s.student_id = p.student_id WHERE s.student_id = 2
GROUP BY s.student_id, s.first_name, s.last_name;
```

|---|------------|------------|-----------|----------------|
| ▶ | 2 | Ramya | Gowda | 15000.00 |

2. Write an SQL query to retrieve a list of courses along with the count of students enrolled in each course. Use a JOIN operation between the "Courses" table and the "Enrollments" table.

```
SELECT c.course_id, c.course_name, COUNT(e.student_id) AS enrolled_students_count
FROM Courses c LEFT JOIN Enrollments e ON c.course_id = e.course_id
GROUP BY c.course_id, c.course_name;

| | 29 | Software Engineering | 1 |
| | 30 | data Structures and Algorithms | 0 |

3. Write an SQL query to find the names of students who have not enrolled in any course. Use a LEFT JOIN between the "Students" table and the "Enrollments" table to identify students without enrollments.

```
SELECT s.student_id, s.first_name, s.last_name FROM students s
LEFT JOIN enrollments e ON s.student_id = e.student_id
WHERE e.student_id IS NULL;
```

4. Write an SQL query to retrieve the first name, last name of students, and the names of the courses they are enrolled in. Use JOIN operations between the "Students" table and the "Enrollments" and "Courses" tables.

```
SELECT s.first_name, s.last_name, c.course_name FROM students s
JOIN enrollments e ON s.student_id = e.student_id

```
SELECT t.first_name AS teacher_first_name, t.last_name AS teacher_last_name, c.course_name
FROM teacher t
JOIN courses c ON t.teacher_id = c.teacher_id;
```

6. Retrieve a list of students and their enrollment dates for a specific course. You'll need to join the "Students" table with the "Enrollments" and "Courses" tables.

```
SELECT s.first_name, s.last_name, e.enrollment_date
FROM Students s
JOIN Enrollments e ON s.student_id = e.student_id
JOIN Courses c ON e.course_id = c.course_id
WHERE c.course_name = 'MYSQL';

7. Find the names of students who have not made any payments. Use a LEFT JOIN between the "Students" table and the "Payments" table and filter for students with NULL payment records.

```
SELECT s.first_name,s.last_name FROM students s
LEFT JOIN payments p ON s.student_id = p.student_id
WHERE p.student_id IS NULL;
```

8. Write a query to identify courses that have no enrollments. You'll need to use a LEFT JOIN between the "Courses" table and the "Enrollments" table and filter for courses with NULL enrollment records.

```
SELECT c.course_id,c.course_name FROM courses c
LEFT JOIN enrollments e ON c.course_id = e.course_id
WHERE e.course_id IS NULL;

1. Write an SQL query to calculate the average number of students enrolled in each course. Use aggregate functions and subqueries to achieve this.

```
SELECT c.course_id, c.course_name, AVG(enrollment_count) AS average_students_enrolled
FROM Courses c
JOIN (
    SELECT course_id, COUNT(DISTINCT student_id) AS enrollment_count
    FROM Enrollments
    GROUP BY course_id
) e ON c.course_id = e.course_id
GROUP BY c.course_id, c.course_name;
```

| | course_id | course_name | average_students_enrolled |

- Identify the student(s) who made the highest payment. Use a subquery to find the maximum payment amount and then retrieve the student(s) associated with that amount.

```
SELECT s.student_id, s.first_name, s.last_name, p.amount AS highest_payment
FROM Students s
JOIN Payments p ON s.student_id = p.student_id
WHERE p.amount = (SELECT MAX(amount) FROM Payments);
```

|---|------------|------------|-----------|-----------------|
| ▶ | 1 | Kavya | Kaja | 18000.00 |

- Retrieve a list of courses with the highest number of enrollments. Use subqueries to find the course(s) with the maximum enrollment count.

```
SELECT c.course_id, c.course_name, COUNT(e.enrollment_id) AS enrollment_count
FROM Courses c
JOIN Enrollments e ON c.course_id = e.course_id
GROUP BY c.course_id, c.course_name
HAVING COUNT(e.enrollment_id) = (
    SELECT MAX(enrollment_count)
    FROM
        (
            SELECT course_id, COUNT(enrollment_id) AS enrollment_count
            FROM Enrollments
            GROUP BY course_id
        ) AS max_enrollments
);
